

Feeling touch through sight: behavioral and neurophysiological evidence of tactile perception beyond the own body boundaries

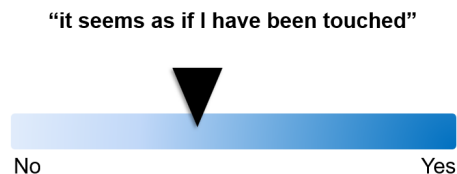

✉ carlotta.fossataro@unito.it

? *Is it possible to feel tactile sensations beyond the physical boundaries of the own body?*

VAS scale
to explore the subjective experience of touch during real- and visual-touch

Rubber Hand Illusion
to temporally alter the sense of body ownership in healthy participants

TMS-EEG
to explore the S1 activity and its connectivity network during real- and visual-touch
